

Appendix 1. Altruism measure

Imagine yourself in a situation in which you can keep or give to another person, all or any portion of \$10. You may give money only in increments of \$1. For example, you can give \$0 and keep \$10, or give \$2 and keep \$8, or give \$8 and keep \$2. These are only hypothetical examples, and the decision of how much to give is entirely yours.

Please imagine the situation to be as close as possible to a real-life situation.
